DETAILED ACTION

Status of the Application

Claims 1-16 are pending in the application.

Receipt of an information disclosure statement with four (4) references in Paper No. 4 is acknowledged.

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claim(s) 1-3, drawn to a method for obtaining an engineered β -ketoacyl-ACP synthase (KAS) having an altered substrate specificity, classified in class 435, subclass 440.
 - II. Claim(s) 4-12, drawn to an amino acid sequence of a KAS, classified in class 435, subclass 193.
 - III. Claim(s) 13-15, drawn to a nucleic acid construct comprising a polynucleotide encoding a KAS, classified in class 435, subclass 320.1.
 - IV. Claim(s) 16, drawn to a method for altering the fatty acid composition of a host cell, classified in class 435, subclass 455.

2. The inventions are distinct, each from the other because:

The nucleic acid of Group III and the polypeptide of Group II each comprises a chemically unrelated structure capable of separate manufacture, use and effect. The nucleic acid of Group III has other utility besides encoding polypeptides such as a hybridization probe and the polypeptide of Group II can be made by another method such as *in vitro* chemical synthesis.

Art Unit: 1652

The polypeptide of Group II is unrelated to the method(s) of Group IV as it is neither used nor made by the method(s) of Group IV.

The polypeptide of Group II and the method of Group I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the polypeptide of Group II can be made by chemical synthesis.

The polynucleotide of Group III and the methods of Groups I and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the polynucleotide of Group III can be used as a hybridization probe.

The methods of Groups I and IV are independent as they comprise different steps, utilize different products and yield different results.

3. Because these inventions are distinct for the reasons given above, have separate classifications, and a separate search is required for each of the inventions listed as Groups I-IV, restriction for examination purposes as indicated is proper. "For purposes of the initial requirement, a serious burden on the examiner may be *prima facie* shown if the examiner shows by appropriate explanation either separate classification, separate status in the art, or a different field of search as defined in MPEP 808.02" (see MPEP 803). Each of the inventions listed as

Art Unit: 1652

Groups I-IV requires a divergent patent and non-patent literature search, thereby establishing a different field of search and resulting in a serious burden of search on the Examiner.

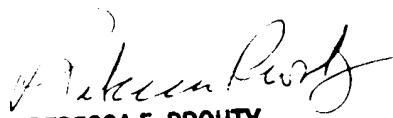

Conclusion

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
